Respected Hiring Manager,

I am excited to apply for the Software Engineer Backend position at Motive. With a BSc in Software Engineering (CGPA 3.95 / 4.0), hands-on experience in Node.js, Python, MySQL, and MongoDB, and a proven record of building scalable backend systems, I am confident in my ability to contribute to Motive's mission of empowering physical operations with innovative technology.

During my internship at Emumba and through my award-winning final year project "SmartPrep AI", I designed and implemented RESTful APIs, optimized database queries, and integrated AI-driven features into full-stack applications. I have a solid understanding of relational and NoSQL databases, microservices architecture, AWS cloud services, and secure, maintainable coding practices.

Motive's vision of delivering safe, productive, and efficient solutions resonates with my passion for creating impactful software. I am eager to bring my technical skills, problem-solving mindset, and collaborative approach to your engineering team.

Best Regards,

Ayesha Maryam
